## Following Rapid Implementation Penn National Insurance Goes Live with Jarvus Technologies' Core Policy Administration System

**Pittsburgh, PA, March 2nd, 2026** – Jarvus Technologies announced that Penn National Insurance, a super-regional property and casualty mutual insurance company with more than \$1 billion in annual premiums, has launched its first line of business on the Jarvus Policy Administration System.

The official implementation of Penn National Insurance's new personal lines system started in February 2025. Jarvus and Penn National Insurance teams worked collaboratively and achieved the first go-live by October 2025, meeting an aggressive schedule and delivering well under budget.

The teams also integrated multiple systems that will accelerate the implementation of additional lines of business in the future.

Insurers often face increasing timelines and difficulty bringing their products to market on time, which can create friction between internal business users and IT teams. Jarvus' Policy Administration System is built with a configuration first approach, which accelerated a typically lengthy process. In the end, the first line of business was implemented on schedule, allowing the teams to start parallel implementations on subsequent lines.

Penn National Insurance's Chief Information Officer, Mike Watts, noted, "Effective technology is critical to the work we do. Working collaboratively with Jarvus allowed us to rapidly transform our Personal Lines Policy Administration System in a way that best served our agents and policyholders. Initial feedback has been overwhelmingly positive, and we look forward to launching additional lines of business on the Jarvus platform later this year."

"Jarvus understands key concerns faced by insurers during these processes. This go-live shows what's possible when insurers and software companies work side by side," said Sundar Vallinayagam, CEO at Jarvus Technologies. "Penn National Insurance's team members were pivotal throughout the process, allowing us to shape a platform that fit their needs, rather than force Penn National Insurance to fit their business to our platform."

### **About Penn National Insurance**

Penn National Insurance ([www.pennnationalinsurance.com](http://www.pennnationalinsurance.com)), founded in 1919, in Harrisburg, Pa., helps people feel secure and makes life better when bad things happen. The company provides property-casualty insurance in 13 states, through a network of more than 1,200 independent agency operations. In 2024, the company wrote more than \$1 billion in direct premiums, had \$2.24 billion in total assets, maintained a \$853 million policyholder surplus, and had an A.M. Best Financial Rating of A. As a mutual insurance carrier, the company operates solely in the best interest of its policyholders and received a Superior Rating for Personal Lines Claims Customer Experience from Ward's for six consecutive years.

**About Jarus Technologies**

Jarus Technologies was founded in 2005 and specializes in core system transformation solutions for the P&C Insurance Industry. The Jarus Policy Administration System leverages a modular architecture that allows insurers to implement purpose-built components to meet their specific business challenges. Jarus is the only vendor that promotes true customer collaboration by offering access to the software source code, which allows insurers to fully control their technology transformation strategy.
